

PAVER-FINISHA™

A new level of enhancement and protection for concrete pavers

New technology that replaces traditional coatings which fade, yellow/whiten, crack and peel

PAVER-FINISHA™ IS CUTTING-EDGE TECHNOLOGY

BETTER PROTECTION

PAVER-FINISHA™ is not a coating. PAVR-FINISHA™ creates a layer of deep color enhancement and protection from water and oil-based stains, plus a deeper layer of water repellence that protects against efflorescence.

A 2" thick concrete paver treated with PAVR-FINISHA™ was placed in 1/4" of water for 3 days to see how far the water would get sucked up into the paver.

Depth of water repellence barrier: 1 1/4" protection against efflorescence

Water traveled: 3/4"

Depth of enhancement and stain repellence: 1/8"

DEEPER ENHANCEMENT

An intense color enrichment that can't be achieved by regular enhancers or topical coatings.

SIMPLE APPLICATION

When the PAVR-FINISHA™ wears, no stripping is required, just clean and re-coat.

LONGER LASTING

Paver finisha is not a coating. Traditional coatings fade, yellow/whiten, crack and peel. PAVR-FINISHA™ is UV stable and lasts approximately 5 years.
